

UNIT-4

Presentation:

- It is a method of delivering an idea or a message across to an audience.
 - Presentation can be hand-made or it can be computerized.
 - A Presentation in the form of slides is created.
 - PowerPoint is a complete presentation graphics package.
 - It gives everything one needs to produce a professional looking presentation.
- **MS-PowerPoint:**
 - MS PowerPoint is a program that is included in the Microsoft Office suite. It is used to make presentations for personal and professional purposes.
 - Microsoft PowerPoint is a powerful presentation software developed by Microsoft.
 - It is a standard component of the company's Microsoft Office suite software, and is bundled together with Word, Excel and other Office productivity tools.
 - Microsoft PowerPoint is a software application that is particularly used to present data and information by using text, diagrams with animation, images, and transitional effects, etc in the form of slides.
 - It helps people to better understand the idea or topic in front of the audience practically and easily.

Features of PowerPoint:

- **Simple and Easy:** It is one of the simplest computer programs to learn. It is very easy to get started with PowerPoint.
- **Electronic Presentation:** It allows for electronic presentations from a computer or from the Internet..
- **Multimedia:** It allows one to use video clips and music files during the presentation.
- **Effects:** This feature allows one to enhance the way the presentation flows.
- **Flexibility:** One can save the presentation in two formats: .ppt and .pps
- **Richness:** It provides a wide range of text and picture formatting. It provides a wide range of views to facilitate the user to maintain and prepare their presentation for use.
- **A Wide Range of Animation:** Custom Animation can be used to create small story boards by animating pictures to enter, exit or move.

- **Printing Option:** PowerPoint has printing options that allow the presenter to provide handouts and outlines for the audience as well as notes pages for the speaker to refer to during the presentation.

Use of MS Power Point:

1.Power Point in education

- Teachers can use PowerPoint to teach subjects lessons and chapters of any book.
- It gives the opportunity to the teacher to cover a topic in the different t slides. And in each slide, they can manage, highlight, mention, and teach important points that are essential to cover on that topic.
- On the contrary, students can create their own presentations for self learning or can create for teachers to show them.

2. PowerPoint in business

- PowerPoint helps people in business to create a plan, structure related to the business or organization.
- In the case of the training team, you create and showcase the methods with the help of diagrams, images, and circles.

3. PowerPoint for job seekers

- Through PowerPoint, job seekers can create digital resumes or multimedia resumes and it will become a unique way of presenting skills and knowledge in front of interviewers

4. Use PowerPoint to Make Tutorials

- For the purpose of training or educational contexts, PowerPoint can be easily used to create worksheets and tutorials.

5. Use PowerPoint as a Photo Slide Show

- By using PowerPoint, you can create photo slide shows or digital album for personal promotional uses. For instance, you can create a touching tribute to your family members.

Different Parts of MS PowerPoint Window:

- Title Bar
- Menu Bar
- Standard Toolbar
- Formatting Toolbar
- Slide Pane
- View Options
- Notes Pane
- Drawing Toolbar
- Status Bar
- Task Pane

Different ways of Creating a Presentation:

➤ **Blank Presentation:**

- On the Standard toolbar, click New.
- The default title layout for the first slide appears. If a different layout is needed, select from the Slide Layout task pane.
- Type the text.
- To insert a new slide, click New Slide and select the desired layout.
- Repeat steps 3rd and 4th for each new slide. Add any other design elements or effects as per choice.
- When finished, click Save. Type a name for the presentation and then click Save.

➤ **From Design Template:**

- On the File menu, click New.
- From the New Presentation task pane, click From Design Template.
- From the Slide Design task pane, select a design template that one likes to apply.
- Type the text for the first slide. To have a different layout one can select Format menu and click Slide Layout before typing the text.
- To insert a new slide, click New Slide and select the desired layout.
- Repeat steps 3rd and 5th for each new slide. Add any other design elements or effects as per choice.
- When finished, click Save. Type a name for the presentation and then click Save.

➤ **AutoContent Wizard:**

- On the File menu, click New.
- From the New Presentation task pane, click From AutoContent Wizard.

- Now from the AutoContent Wizard, select the presentation type that best fits one's needs. Click Next to move on the next step. To move to the previous step, click at Back button.
 - Decide and select the presentation style. Choose the output that wizard should generate. Click Next.
 - Now, it is time to select the presentation options. One can enter Presentation Title, Footer information in this step. One can also tick the check boxes to display the date last updated and the slide number on every slide.
 - So, all the basic questions have been answered, Click Finish button.
 - Now a presentation with some slides in it guides one the kind of contents it requires.
 - To enter one's information, go to the desired slide by clicking the desired slide number. Then type own information.
 - When completed, click Save button. Type a name for the presentation and then click Save.
- **From Existing Presentation:**
- On the File menu, click New.
 - From the New Presentation task pane, click from Existing Presentation.
 - Under New from Existing Presentation, select the desired presentation.
 - Click, Create New.
 - Make the changes to the existing presentation and save it.

Creating Slides:

Open PowerPoint:

- Launch Microsoft PowerPoint on your computer.

Create a New Presentation:

- Click on "File" and select "New" to start a new presentation.
- Choose a blank presentation or a template.

Adding Slides:

- Click on the "Home" tab.
- Use the "New Slide" button to add a new slide. You can also right-click in the slides panel on the left and choose "New Slide."

Slide Layout:

- Choose a suitable layout for your slide. Right-click on a slide in the left panel and select "Layout" to change it.

Manipulating Slides:**Rearrange Slides:**

- In the left panel, click and drag slides to rearrange them.

Duplicate Slides:

- Right-click on a slide in the left panel and choose "Duplicate Slide."

Delete Slides:

- Select a slide and press the Delete key, or right-click and choose "Delete Slide."

Slide Transitions:

- Go to the "Transitions" tab to add transition effects between slides.

Enhancing Slides:**Text Formatting:**

- Click on the text box and use the options in the "Home" tab to format text (font, size, color, etc.).

Inserting Images:

- Click on the "Insert" tab and select "Pictures" to add images to your slides.

Adding Shapes:

- Use the "Shapes" option in the "Insert" tab to add different shapes to your slides.

Charts and Graphs:

- In the "Insert" tab, select "Chart" to add a chart. Choose the chart type and input your data.

SmartArt:

- Create visual representations of information using the "SmartArt" option in the "Insert" tab.

Animations:

- Go to the "Animations" tab to add entrance, emphasis, and exit animations to elements on your slide.

Slide Show:

- Click on the "Slide Show" tab to rehearse timings, set up slide shows, and customize the presentation experience.

Speaker Notes:

- Use the "Notes" section in the bottom of the screen to add speaker notes for each slide.

Slide Master:

- Access the "Slide Master" under the "View" tab to make global changes to the presentation's layout and formatting.

Collaboration:

- Share your presentation for collaboration using OneDrive or SharePoint.

Save and Export:

- Regularly save your presentation. Use the "File" tab to save, export, or print your presentation.

Review and Proofing:

- Utilize the "Review" tab for spelling and grammar checks.

Remember to continuously save your work and preview your presentation to ensure everything looks as expected. PowerPoint offers a wide range of features, so explore and experiment to discover what works best for your specific presentation needs

Slide Layout:

- The Slide Layout is the arrangement of all the objects that make up the slide.
- Objects include text, images, tables, media and charts.

- Slide Layouts define containers, positioning and formatting for all of the content that appears on a slide.
- Slide layout will get in home menu bar.
- Microsoft Office PowerPoint includes nine built-in slide layouts.

The Various Slide Layouts in PowerPoint:

- **Title Slide:** Generally the Title Slide is the first slide of the presentation. The Title Slide contains the presentation title. One can also add sub title like presenter's name or date or presenting company's name in the Title Slide. Usually there is one Title Slide in a presentation.
- **Title and Content:** It includes two placeholders. Top text box uses large type of serve as the slide title; a large content box at the bottom can contain bulleted text, table, chart, SmartArt, picture, clip art or movie.
- **Section Header:** It is similar to Title in that it contains title and subtitle placeholders. It is used to set off a section in longer presentations.
- **Two Content:** It has three placeholders: a title and two content boxes.
- **Comparison:** It contains a title, two content boxes and header text for each content box.
- **Title Only:** It is alternate title slide. It includes one text box with large type, justified to the top of the slide.
- **Blank:** It contains only the slide background. Use this for really large or complex graphics.
- **Content with Caption:** It contains one large content box, with a large text box to serve as a title.
- **Picture with Caption:** It contains one large photo placeholder with a large text box to serve as a photo title. It is good for photos that need captions.

Views:

- A View is a way of managing and representing a slide.
- It is a way of displaying and working with the presentation.
- Thus, it is possible to display a presentation in a number of different ways.
- Each view provides a different way to look and work with the presentation.
- The View buttons appear near the bottom of the screen.

Different Views of PowerPoint:

- **Normal View:**
 - This is the default view and opens automatically when PowerPoint is started.
 - It is the main editing view.

- It is within this view that one creates new slides, amend existing slides and add objects, images etc.
- This view allows one to build and edit the presentation slide by slide.
- **Slide Sorter View:**
 - It shows all of the slides at once.
 - One may change the order of the slides by dragging each slide to the desired location in the presentation.
 - Slide Sorter view displays the slides as small thumbnails displaying the slide numbers underneath.
 - This is extremely useful when one want to rearrange the order of the slides by displaying the whole presentation.
- **Slide Show:**
 - It occupies the full computer screen, exactly like an actual presentation.
 - In this view one can see the presentation the way the audience will see.
 - One can see how the graphics, timings, animated effects and transition effects will look during the actual presentation.
 - This view is used to deliver the presentation to the audience.
 - To Navigate to Slide Show View, click the Slide Show button.
 - To exit the Slide Show, Press the ESC key on the keyboard.

Steps to add Header and Footer in PowerPoint Presentation:

- Select the Header and Footer option from the View menu.
- In the Header and Footer dialog box, click the Slide or Notes and Handouts tab.
- To insert the Date and Time, check the Date and Time check box.
- To insert the Slide Number, check the Slide Number check box.
- To insert the Footer, check the Footer option and enter the required text.
- Click on the Don't show on title slide option to suppress the title in the Title slide of the presentation.
- Click on the Apply button to apply the settings to only the current slide or click on the Apply to All button to apply the setting to every slide in the current presentation.

Word Art:

- Word Art is a tool in MS PowerPoint that allows:
 - To create stylized text by adding special effects and color.
 - To give special effects to the text such as curved text, 3D text and more.
 - To introduce text with an interesting form or shape to it.

- To highlight important words or phrases in a presentation or slide title.
- To add color and help text stand out from the rest of the slide.
- To add effects like outlines, gradients, shadow, glow, reflection, 3-D and more.
- To wrap and stretch photos to fill in text instead of color.
- Word Art is found under the Insert Tab in PowerPoint.
- Creating WordArt in PowerPoint is similar to doing so in Word, as both applications are part of the Microsoft Office suite. Here's how you can add WordArt in PowerPoint:

Open Microsoft PowerPoint:

- Launch Microsoft PowerPoint on your computer.

Insert WordArt:

- Navigate to the slide where you want to add WordArt.

Choose WordArt Style:

- Go to the "Insert" tab.

Insert WordArt:

- In the "Text" group, click on the "WordArt" button.
- Choose a WordArt style from the gallery.

Enter Text:

- A text box with the selected WordArt style will appear on your slide.
- Enter the text you want to stylize.

Edit Text:

- Double-click on the WordArt text to edit it.

Format WordArt:

- With the WordArt text selected, go to the "Format" tab.
- Use the options in the "WordArt Styles" group to customize the appearance, including text fill, outline, effects, and more.

Move and Resize:

- Click and drag to move the WordArt text to the desired location.

- Resize by dragging the handles on the corners.

Rotate:

- Use the rotation handle above the WordArt text to rotate it.

Group with other Elements:

- You can group WordArt with other elements by selecting them, right-clicking, and choosing "Group."

Animation (Optional):

- If you want to add animation to your WordArt, go to the "Animations" tab and choose an animation effect.

Slide Show:

- Preview your slide in Slide Show mode to see how the WordArt appears in the presentation.

Using WordArt in PowerPoint can help you create visually appealing titles, headings, or decorative text within your slides. Experiment with different styles, fonts, and formatting options to achieve the desired visual impact.

Inserting Charts:

- MS PowerPoint includes many different types of data charts and graphs including column charts, line graphs, pie charts, bar charts, area graphs, scatter graphs, stock charts, surface charts, doughnut charts, bubble graphs, and radar graphs.

Steps for Inserting a Chart in your presentation are as follows:

- In PowerPoint, click the placeholder that you want to contain the chart.
- On the Insert tab, in the Illustrations group, click Chart.
- In the Insert Chart dialog box, click the arrows to scroll through the chart types. Select the type of chart that you want and then click OK.
- In MS Excel, to replace the sample data, click a cell on the worksheet, and then type the data that you want. After you update the worksheet, the chart in PowerPoint updates automatically with the new data.
- When you are finished inputting the data in MS Excel, on the File menu, click Close.

Organizational Charts:

- An Organizational Chart graphically represents the management structure of an organization such as department managers and non-management employees within a company.
- MS PowerPoint allows the easy creation of organization charts.
- Organization charts can be used to create hierarchical diagrams which can be customized, resized or pasted into other MS office packages.
- The easiest way for creating an organization chart is to create a new slide using the Organization Chart Slide Layout.

Steps for creating an Organizational Chart are as follows:

Creating an organizational chart in Microsoft PowerPoint is a straightforward process. Here's a step-by-step guide:

Open PowerPoint:

- Launch Microsoft PowerPoint on your computer.

Create a New Presentation:

- Click on "File" and select "New" to start a new presentation.

Insert a SmartArt Graphic:

- Go to the "Insert" tab.
- Click on "SmartArt" in the Illustrations group.

Choose an Organizational Chart:

- In the "Choose a SmartArt Graphic" dialog box, select the "Hierarchy" category on the left.
- Choose an organizational chart layout that suits your needs. Common options include "Organization Chart" or "Picture Organization Chart."

Enter Text:

- A SmartArt graphic will be inserted into your slide.
- Enter the names and positions by clicking on the placeholders.

Add or Remove Shapes:

- To add a new shape, select an existing shape, and press "Enter."
- To remove a shape, select it and press "Delete."

Format and Customize:

- Use the "SmartArt Tools" tab to format and customize your chart.
- You can change colors, styles, and add effects.

Excel Charts:

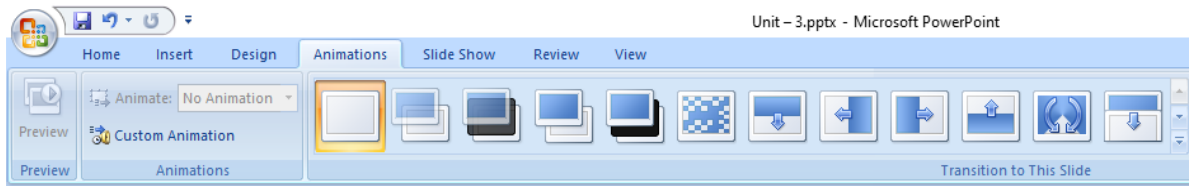

- PowerPoint offers the ability to create charts and graphs and add these to the presentations.
- Often graphs are easier for the audience to understand, compare and analyse as they are clearer on the screen than tables of data.

Steps to add an Excel Chart to the Presentation:

- Open the PowerPoint and display the slide where the chart is to be added.
- To create a new chart, Go to Insert > Object.
- Click on Create New, and then choose Microsoft Excel Chart from the "object type" list.
- Click on OK. A "generic" Excel chart will appear on the slide.
- To use an existing chart, Go to Insert > Object. Click on Create from File, and "browse" the computer for the Excel file to be used. When found, click on OK. The chosen Excel Chart will appear on the desired slide.
- To Modify Chart – "Right Click" on the chart – a chart modifying menu appears. Use the menu options to modify the chart and spreadsheet to desired specifications.
- Click outside the chart to "finalize" chart modifications, and to continue modifying the PowerPoint Slide.

Animation:

- Animation can help make a PowerPoint presentation more dynamic, and help make information more memorable.
- This tab can be used to set animations for the PowerPoint presentation. Animations determine how the bullets, pictures, images, and other objects will enter the slide during a presentation.

Steps to apply Animation effects to text and objects are as follows:

- Open the presentation and click Slides tab to select the slides for adding animation effect.
- On the Slide Show menu, click animation scheme. The Slide Design task pane appears.
- In the Slide Design task pane, under Apply to selected slides, click an animation scheme in the list.
- If all the slides need to be animated, then click the Apply to All Slides button.

Applying a Custom Animation:

- In Normal view, display the slide with text or objects one wants to animate.
- Select the object.
- On the Slide Show menu, click Custom Animation.
- In the Custom Animation task pane click Add Effect. Customer Animation list comprises of a list of animation sequences for a slide. Select one or more of the following:
 - To make the text or object enter the slide show presentation with an effect, point to Entrance tab and then select an effect.
 - To add an effect to text or object on the slide, point to Emphasis and then select an effect.
 - To make the text or object leave the slide at some point, point to Exit and then select an effect.
 - To make the text or object move on the slide in a desired direction point to motion path and then select an effect.
- To view other animation effects click more effects from each option in the Custom Animation task pane. To apply, click the desired effect option.

Steps for adding music, songs, or sound effects on a slide are ass follows:

- In Slide View, display the slide to which one wants to add music or sound effects.
- On the Insert menu, point to Movies and Sounds, and then do one of the following:
 - To insert a sound file, click Sound from File, locate the folder that contains the required file and then double-click the file.
 - To insert a sound clip from Clip Organizer, click Sound from Clip Organizer, scroll to find the clip and then select it to add to the slide.
- Double-click the sound file to be inserted.
- When a message is displayed, do one of the following:
 - To play the music or sound automatically, click Automatically.
 - To play the music or sound only when the sound icon is clicked, click When Clicked.
- To adjust the settings for when the sound file stops, click the sound icon, right-click, and then click Custom Animation.
- In the Custom Animation task pane, click the arrow on the selected item in the Custom Animation list, and then click Effect Options.
- On the Effect tab, under Stop playing, do one of the following:
 - To stop the sound file on mouse-click of this slide, select On Click (By Default).
 - To stop the sound file after this slide, select After current slide.
 - To keep the sound file playing for several slides, select After, and then set the total number of slides the file should play on.

Slide Transition:

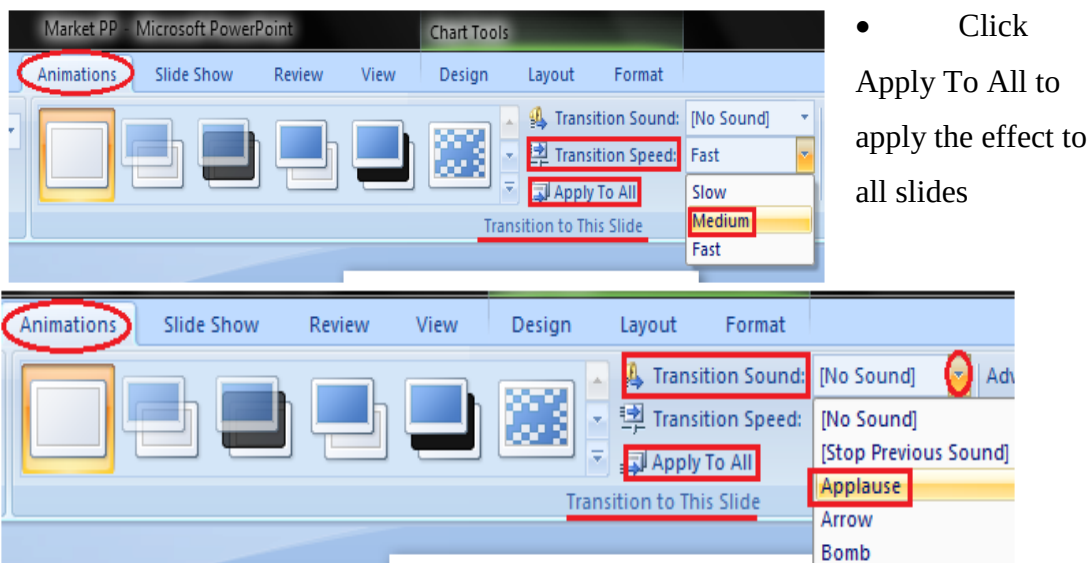

- Slide Transition are the animation-like effects that occur in Slide Show view when you move from one slide to the next during an on-screen presentation.
- You can control the speed of each slide transition effect, and you can also add sound.
- Slide Transition are a good way to add visual interest when you change slides.

Add transition between slides :

- Select the slide to which you want to apply the effect
- Select the Animation tab
- In Transition to This Slide group you will see the transition effects
- Click the drop-down arrow to see menu of transition effects

How to Set Slide Transition Sound

- Select the slide to which you want to add the transition sound
- Select the Animation tab
- In Transition to This Slide group click the drop-down arrow next to Transition Sound option
- A list of different transition sounds appears
- Select the desired transition sound
- Click Apply To All to apply the effect to all slides desired transition effect

How to Set Slide Transition Speed :

- Select the slide
- Select the Animation tab
- In Transition to This Slide group click the drop-down arrow next to Transition Speed option
- It will display three options for transition speed
- Select the desired transition speed
- Click Apply To All to apply the same transition speed to all

Layering art objects: -

Adding an art object to a PowerPoint presentation is a great way to enhance visual appeal.

Here are the general steps to insert an art object into PowerPoint:

Open PowerPoint:

- Launch PowerPoint on your computer.

Create a New Slide:

- Open the presentation where you want to add the art object or create a new one.

Insert Picture:

- Click on the slide where you want to add the art object.
- Go to the "Insert" tab in the PowerPoint ribbon.

Inserting from File:

- If your art object is a file on your computer, choose "Pictures" or "Picture" from the options and select the file.

Inserting Online Pictures:

- If you want to insert an image from the internet, choose "Online Pictures" and search for the image.

Inserting Shapes:

- If your art object is a shape that you want to draw, go to the "Insert" tab, select "Shapes," and choose the desired shape.

Inserting SmartArt:

- If your art object involves a diagram or process, you can use SmartArt. Go to the "Insert" tab, select "SmartArt," and choose the type of SmartArt that fits your content.

Adjust and Format:

- Once the art object is inserted, you can resize it, move it around, and format it using the options in the PowerPoint ribbon.

Arrange the Layers:

- If you have multiple objects on a slide, you may need to arrange their order. Right-click on an object, go to "Send to Back" or "Bring to Front" to adjust the layering.

Apply Animation (Optional):

- To add some flair to your presentation, you can apply animations to your art object. Go to the "Animations" tab, select an animation, and customize its settings.

Preview Your Slide:

- Click the "Slide Show" button to preview your slide and see how the art object looks in the context of your presentation.

Save Your Presentation:

- Don't forget to save your PowerPoint presentation to keep the changes. These steps should guide you through the process of adding an art object to your PowerPoint presentation.

Inserting Recorded sound effect or inbuilt sound effect: -

Adding sound effects to your PowerPoint presentation can enhance the overall experience. Here's how you can insert recorded or built-in sound effects:

➤ Inserting a Recorded Sound Effect:

Open PowerPoint:

- Launch PowerPoint and open your presentation.

Navigate to the Slide:

- Go to the slide where you want to add the sound effect.

Insert Audio:

- Click on the "Insert" tab in the PowerPoint ribbon.

Choose Audio:

- Select "Audio" from the options.
- If your sound effect is a file on your computer, choose "Audio on my PC..." and select the file.

Insert Online Audio:

- If you prefer, you can also choose "Online Audio" to search for sound effects available on the internet.

Adjust Audio Settings:

- Once inserted, you can click on the audio icon to reveal the "Audio Tools" options in the ribbon. Here, you can adjust settings such as playback options, volume, and more.

Trimming (Optional):

- You can use the "Trim Audio" option to cut the sound clip if needed. This is useful if you only want to use a specific portion of the audio file.

Automatic or Manual Start:

- Decide whether you want the sound to start automatically when the slide is displayed or manually by clicking.

Preview:

- Click on the audio icon and use the "Play" button to preview the sound effect.

Save Your Presentation:

- Don't forget to save your presentation to keep the changes.

Inserting a Built-in Sound Effect:**Open PowerPoint:**

- Launch PowerPoint and open your presentation.

Navigate to the Slide:

- Go to the slide where you want to add the built-in sound effect.

Insert Sound:

- Click on the "Insert" tab in the PowerPoint ribbon.

Choose Audio:

- Select "Audio" and then choose "Online Audio" or "Audio on my PC..." depending on whether you want to use a built-in or external sound file.

Built-in Sound Effects:

- If you choose "Online Audio," you can search for sound effects available online. If you choose "Audio on my PC...," you can select "Sound from the Office.com Clip Art" to access built-in sound effects.

Insert and Adjust:

- Once inserted, you can adjust the settings as mentioned in the steps for recorded sound effects.

Preview:

- Click on the audio icon and use the "Play" button to preview the sound effect.

Save Your Presentation:

- Save your presentation to keep the changes.

These steps should help you add both recorded and built-in sound effects to your PowerPoint slides.
