

Word processor: -

A word processor is software or a device that allows users to create, edit, and print documents. It enables you to write text, store it electronically, display it on a screen, modify it by entering commands and characters from the keyboard, and print it.

The application software or program which helps us in processing the text is called a 'Word Processing Software, or simply a 'Word Processor'

Popular Word Processing Packages

The commonly used word processing packages are:

MS-WORD, Word Star, Word Perfect, Professional Write

Uses of Word Processing

Normally, a word processor can accomplish the following tasks:

- Brochures
- Newsletters
- Reports
- Advertisement
- Resumes and Cover letters
- Books
- Directories
- World Wide Web Pages

FEARTURE OF WORD PROCESSOR: -

•Working with Text and Styles

Microsoft Word is a word processor, which means that it's designed primarily for text-based documents. These can be business reports, student papers, informal notes from a call or a lecture, or letters to friends and relatives.

•Saving and Printing

After you create a document in Word, you usually want to save it for later access, send to someone, print it out, or any combination of these uses.

- **Word and Compatibility**

Microsoft Word has been designed for years to maximize compatibility between versions. Typically, versions of Microsoft Word can open files created in previous versions of the software and save files in formats usable by earlier versions.

- Preview Facility:** Before getting a print of our document, we can get a preview of document. If mistakes are there, we can change the document.

- Easy Typing:** In MS Word, typing is so easy because

–we need not click enter button after the end of a line as in case of type writer.

Adding, Removing and Copying Text: Documents can be modified easily in MS Office. We need not strike off any word as in the case of type writer. We can easily place a new word in place of existing one. The new word or paragraphs will automatically be adjusted in the place of deleted or modified text. We can also copy a part or whole of the matter from one file or document to another document.

- Spell Check of words:** The spellings of words in the document can be rectified automatically. We can find alternative words to our typed words. Not only that, even the grammatical errors can also be rectified in word processor

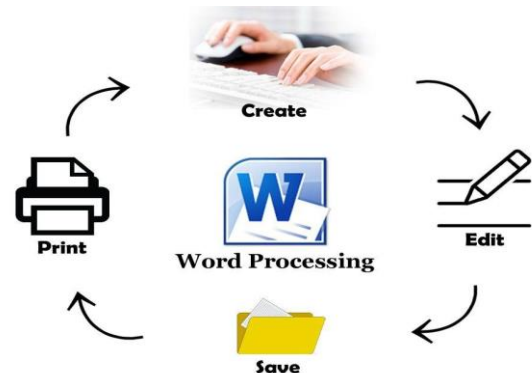

Headers and Footers: A Header is the text appearing above the document and Footer is the text appearing below the document. In Word Processor, we can create these Headers and Footers in the document easily.

- Creation of Tables:** Tables can be created neatly in word processor. If you give directions for required number of rows and columns, word processor provides a readymade table to work.

Bullets and Numbering: Bullets are special symbols which can be put for different points in a document whereas numbers are ascending figures like 1, 2, 3, etc.

Advantages of Word Processing:

- It allows users to easily create documents. The ease of making changes in word processing files gives users flexibility with their work.
- It allows the user to check the layout of their writing before it is printed. User can view the document on the monitor before printing on paper.

- Word Processing programs allow users to include various types of graphics within documents.
- It is easy to store copies of a document for later use. Any previous document can be retrieved and modified, as desired, without the need of retyping it in full. This saves both time and effort.
- Modern word processing software enables the user to use different font styles, sizes and colours all in the same document.
- Many copies of the same document can be printed without the need of retyping the document over and over again.
- Word processors are now relatively affordable.
- It provides the facility to create tables automatically.
- It automatically wraps text to the page based on page margins, paragraph indents and other criteria.

MS WORD: -

- Microsoft Word is a popular word processing software application developed by Microsoft.
- It is part of the Microsoft Office suite of productivity software and is available for both Windows and macOS operating systems.
- Microsoft Word allows users to create, edit, format, and save documents such as letters, reports, essays, resumes, and more.
- It is quite flexible and easy to use.
- It is one of the most popular word processors for windows.
- It has a number of menus and commands that are user friendly.
- It provides the facility to save the document automatically after pressing save commands.
- It is a word processing program that allows for the creation of simple documents

Features of Microsoft Word Include:

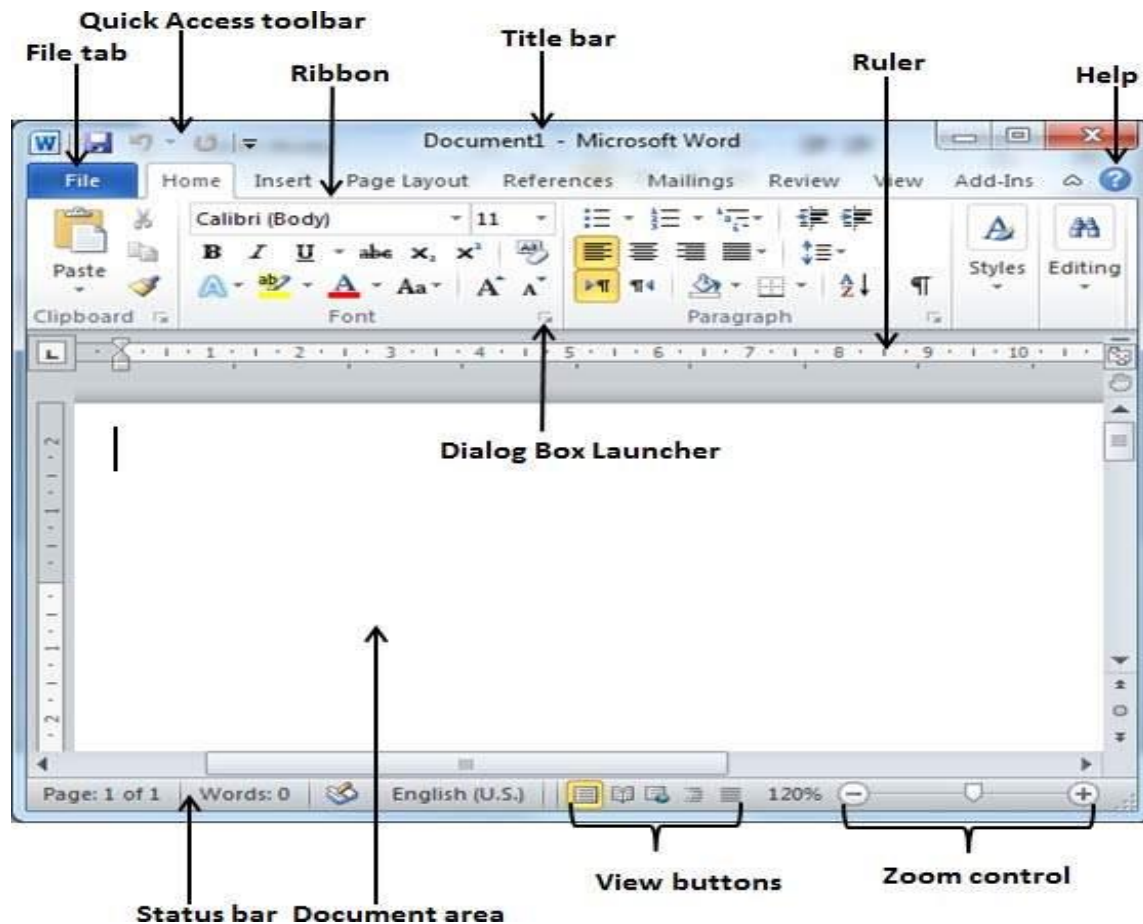

- **Word Processing:** You can type and format text, insert images, tables, and other objects, and create a wide variety of document types.
- **Templates:** Microsoft Word provides a range of pre-designed templates for various document types, making it easier to create professional-looking documents.
- **Spell and Grammar Checking:** It includes built-in spell check and grammar check tools to help you proofread your documents.

- **Formatting Tools:** You can format text with different fonts, sizes, colors, styles, and alignment options. It also offers features like bullet points, numbered lists, and paragraph spacing.
- **Page Layout:** You can customize page margins, orientation (portrait or landscape), page size, and add headers and footers to your documents.
- **Tables and Charts:** Microsoft Word lets you create and format tables, charts, and graphs within your documents.
- **Mail Merge:** You can use the Mail Merge feature to create personalized letters, envelopes, and labels by merging data from a spreadsheet or database.
- **Accessibility:** Microsoft Word includes features to improve document accessibility, making it easier for people with disabilities to read and edit documents.
- **Integration:** It integrates with other Microsoft Office applications like Excel and PowerPoint, allowing you to embed and link content from those programs into your Word documents.

Different Parts of MS-WORD Window:

- **Title Bar:** It displays the document name, program name and standard windows control buttons. It is located at the top of the screen.
- **Menu Bar:** It is located below the title bar. There are nine menu options on the menu bar. As one clicks on any of these options (File, Edit, View, Insert, Format, Tools, Table, Window or Help) a drop-down menu of commands will appear.
- **Standard Toolbar:** Below the menu bar appears the standard toolbar. It provides shortcuts for menu options. It consists of most frequently used commands and utilities.
- **Formatting Toolbar:** Below the standard toolbar appears the formatting toolbar. It helps to format text in a document.
- **Ruler Bar:** It is located below the formatting toolbar. It provides ongoing page measurement and quick access to margins, tabs etc.
- **Work Space/ Document Area:** It is the area in the document window where the text is typed. In this document window the text is written, edited and formatted.

- **Scroll Bars:** It is used to move the document. There are two scroll bars. One is at the right side of the screen called Vertical Scroll Bar. The second is at the bottom of the screen called Horizontal Scroll Bar.
- **Status Bar:** It is located at the bottom of the Word Interface. This bar displays information about the document on which the user is currently working.

MENU OF MS WORD: -

Each of menus contains the following tools.

- **Home:** Clipboard, Fonts, Paragraph, Styles, and Editing.
- **Insert:** Pages, Tables, Illustrations, Links, Header & Footer, Text, and Symbols.

- **Page Layout:** Themes, Page Setup, Page Background, Paragraph, Arrange
- **References:** Table of Contents, Footnote, Citation & Bibliography, Captions, Index, and Table of Authorities
- **Mailings:** Create, Start Mail Merge, Write & Insert Fields, Preview Results, Finish
- **Review:** Proofing, Comments, Tracking, Changes, Compare, Protect
- **View:** Document Views, Show/Hide, Zoom, Window, Macros

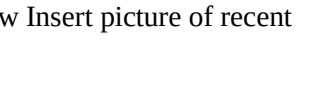

Creating opening saving and printing the documents in MS Word: -

➤ **Create a New Document**

There are several ways to create new documents, open existing documents, and save documents in Word:

- I. for creating a document, Click the Microsoft Office Button and Click New or
- II. Press CTRL+N on the keyboard.

➤ **Opening an Existing Document**

- I. Click the Microsoft Office Button and Click Open, or
- II. Press CTRL+O on the keyboard, or
- III. If you have recently used the document, you can click the Microsoft Office Button and click the name of the document in the Recent Documents section of the window 

➤ **Saving a Document**

- IV. Click the Microsoft Office Button and Click Save or Save As, or
- V. Press CTRL+S on the keyboard, or
- VI. Click the File icon on the Quick Access Toolbar.

➤ **Printing Document to a file page**

After completing document can take print easily.

- I. Print –In print option you can change the number of copies, select page no., choose printer etc. before printing.

- I. Quick Print –In quick print the document is directly send to the printer without making any changes.
- II. Prints Preview –Preview and make changes to pages before printing.

Formatting Document

❖ Font Type and Size:

- Select the text you want to format.
- Choose the font type and size from the "Font" group in the Home tab.

❖ Bold, Italics, Underline:

- Select the text.
- Use the buttons in the "Font" group to apply bold, italics, or underline.

❖ Font Color:

- Select the text.
- Click on the "Font Color" button in the "Font" group to choose a color.

❖ Highlighting:

- Select the text.
- Click the "Text Highlight Color" button in the "Font" group.

Headings and Styles:

❖ Applying Headings:

- Select the text you want to use as a heading.
- Choose the appropriate heading level (Heading 1, Heading 2, etc.) from the "Styles" group in the Home tab.

❖ Creating a Table of Contents:

- Use Heading styles for your headings.
- Go to the "References" tab and click "Table of Contents" to generate a table of contents.

Spacing and Indentation:

❖ Line Spacing:

- Select the text or paragraph.

- Click the "Line and Paragraph Spacing" button in the "Paragraph" group and choose the desired line spacing.

- ❖ **Indentation:**

- Use the "Increase Indent" and "Decrease Indent" buttons in the "Paragraph" group to adjust indentation.

- ❖ **Lists:**

- **Bulleted or Numbered Lists:**

- Select the text you want to turn into a list.
- Click the "Bulleted List" or "Numbered List" button in the "Paragraph" group.

- ❖ **Page Layout:**

- **Margins:**

- Go to the "Layout" tab and click "Margins" to choose preset margin settings or customize your own.

- **Page Orientation:**

- Click on "Orientation" in the "Layout" tab to switch between portrait and landscape orientation.

- **Page Breaks:**

- Place the cursor where you want the page break.
- Go to the "Insert" tab and click "Page Break."

Finding and replacing text

Find and Replace helps you to find words or formats in a document and can let you replace all instances of a word or format.

•This is particularly handy in long documents. To use Find and Replace, use the shortcut Ctrl+H or navigate to Editing in the Home tab of the ribbon, then choose Find and Replace.

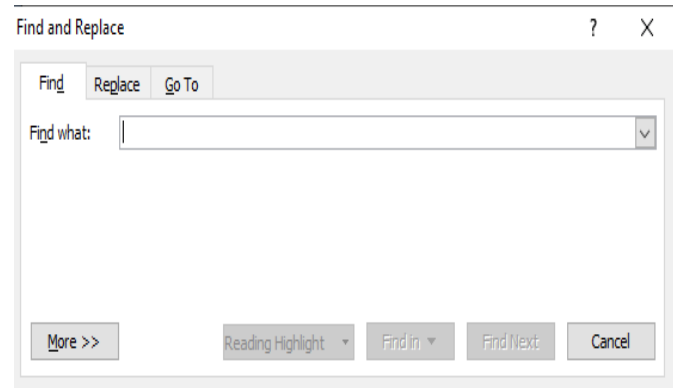

FIND TAB STEPS:

•Find searches for specified text in the active document

- To find a specified text in the document go to Edit menu choose find option or click the find icon () on the toolbar or make use of the shortcut key combination Ctrl+F.

- The Find and Replace dialog box will get displayed.

- Enter the text to be searched in the Find what tab.

- Clicking the Find Next button the specified text will be located in the document.

REPLACE TAB STEPS:

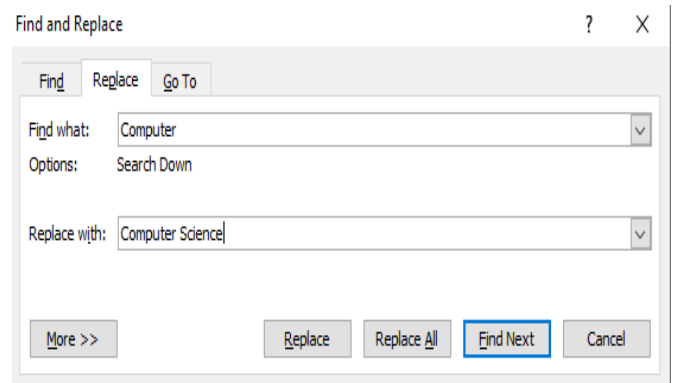

To find and replace a word or phrase in your document you need to

- Go to Edit section in the Home Tab select “Replace” to open the find /replace dialog box.

- Enter the text in the “Find what” box.

- Enter the text in the replace box which you want to replace.

If you do not enter any character at the “Replace box”, the program will delete all the results matching the search criteria.

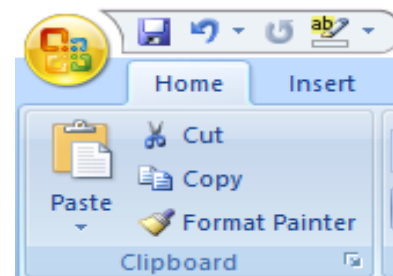

Format painter

- Many times we need to apply the same formatting effects, like font, font size, style, color, border, shading and many more to different portions in active document with the help of Format Painter facility in MS Word.

- Format in MS Word is an important tool of Microsoft Word.

- You can use Format Painter to quickly applied copied formatting from one place to another place in the active document of MS Word.

•If you want to cancel Format paint then you just simply press ESC key.

Method 1: Format Painter using the Shortcut Key Combination

Step 1. If you want to copy formatting to place and apply on another place then first you have to select the formatted text or shape which formatting you want to copy.

Step 2. To copy the formatting press CTRL+SHIFT+C shortcut key combination.

Step 3. Select the target text or shape on which you want to paste or apply copied formatting.

Step 4. To paste formatting on target location you have to press CTRL+SHIFT+V shortcut key combination.

Method 2: Format Painter using the Mouse

You can also use another method to copy formatting from one place to another place using the Mouse:

Step1. Select the formatted text or shape (source location) which formatting you want to copy.

Step2. Now, click on the Format Painter button which is placed in the Home tab >>> Clipboard group for copy formatting.

Step3. Select the target text or shape (target location) on which you want to paste formatting.

Header or Footer: -

Headers and footers in Microsoft Word are sections at the top and bottom of each page in a document where you can add text, page numbers, date, time, document title, and more. Here's how you can add and customize headers and footers in Word:

Adding a Header or Footer:

1. **Open your Document:** Open the Microsoft Word document where you want to add a header or footer.
2. **Navigate to the Insert Tab:**
 - Go to the "Insert" tab in the Word ribbon.
3. **Adding a Header:**

- Click on the "Header" button in the "Header & Footer" group.
- Choose a built-in header layout or select "Edit Header" to create a custom header.

4. Adding a Footer:

- Click on the "Footer" button in the "Header & Footer" group.
- Choose a built-in footer layout or select "Edit Footer" to create a custom footer.

Editing the Header or Footer:

1. Edit the Text:

- Click inside the header or footer area to edit the text. You can add your desired text, page numbers, date, time, etc.

2. Inserting Elements:

- Use the options in the "Header & Footer" group to insert page numbers, date, time, and other elements into the header or footer.

3. Formatting:

- You can format the text and elements in the header or footer using the formatting options in the "Home" tab.

Different Headers and Footers for Sections:

1. Different First Page:

- If you want a different header/footer for the first page, check "Different First Page" in the "Header & Footer" group.

2. Different Odd and Even Pages:

- To have different headers/footers for odd and even pages, check "Different Odd & Even Pages" in the "Header & Footer" group.

Closing the Header or Footer:

- To exit the header or footer area and return to the main document, double-click the main body of the document or click the "Close Header and Footer" button in the "Close" group under the "Design" tab.

These steps should help you set up and customize headers and footers in Microsoft Word to suit your document's needs.

Autocorrect:

- MS-Word provides the Autocorrect feature for automatically correcting the common typing and spelling mistakes.
- For example, autocorrect will replace adn with and.
- To open the Autocorrect dialog box, the following steps are followed:
 - Select Tools menu.
 - Select Autocorrect command.
- The top part of the Autocorrect dialog box deals with capitalization:
 - The option “Correct Two Initial Capitals” leaves only the first letter capitalized when one type that starts with two capital letters and then the rest lowercase letters. For example, Suman becomes Suman.
 - The option “Capitalize first letter of sentences” capitalizes the first letter of the first word of the sentence.
 - The option “Capitalize first letter of table cells” capitalizes the first letter of the first letter of table cells.
 - The option “Capitalize names of the days” makes sure that the days of the week (Sunday, Monday and so on) begin with a capital letter. That is why ‘sunday’ is changed to ‘Sunday’.

- The bottom part of the Autocorrect dialog box deals with spelling and the addition of special characters. One can make certain auto correct entries so that word automatically corrects spelling errors. Steps to add the Autocorrect entry are:
 - From the Tools menu, choose AutoCorrect.
 - In the Replace box, type the misspellings that are commonly made.
 - In the with box, type of correct spelling of the word.
 - Click the Add button, similarly, if user doesn't want to use one of the items in the list, he/she can select it and click Delete to remove the item from the list.
 - Click OK.
- AutoCorrect can be turned on and off from the Tools menu using the following steps:
 - Go to the Tools menu and select options.
 - Click the Spelling and Grammar tab.
 - In the Spelling area, check (on) or uncheck (off) the check spelling as you type checkbox.

Tables:

- Tables are a great way to organize data.
- They can save lots of time.
- It displays information in an easy-to-read format.
- Tables can even be made invisible so that they keep all the text in the right places, but do not distract the reader.

Two types of Inserting Tables:

a. First Method:

- Put the blinking cursor on the page where table is to be inserted.
- Click the “Table” button in the top menu bar and HOLD DOWN the mouse button. A Grid will appear below the arrow.

- Drag the mouse down and to the right until the required table size is highlighted.
- Release the mouse. An empty table appears in the document.

b. Second Method:

- Click on “Table” in the top menu bar.
- Now click on “Insert Table...” in the drop-down menu.
- That will bring up the window. In this window specify the number of rows and columns.
- Another option is to specify the look of the table by clicking the “AutoFormat...” button and choosing a table style.

When finished click the “OK” button and table will be inserted into the document

Editing Table:

- After creating a table one can type in the cells. Sometimes, need may arise to make changes to the table.
- Some of the basic alterations can be:
 - **Insert a row:** Click in the table where the new row is needed. Click “Table”, then “Insert Rows”.
 - **Delete a row:** Highlight the row to be deleted, then click “Table”, then “Delete Rows”.
 - **Merge Cells:** Highlight the cells to merge into one cell, then click “Table”, then “Merge Cells”.
 - **Split Cells:** Highlight the cell to be split into multiple cells, then click “Table”, then “Split Cells”, then choose the number of rows and columns to create, and finally click “OK”.
 - **Making all rows of the same size:** Highlight the rows to be changed, then click “Table”, then click “Distribute Rows Evenly”.
 - **Making all columns of the same size:** Highlight the columns to be changed, then click “Table”, then click “Distribute Columns Evenly”.

Auto Text:

- It is a way to insert or type the same thing over and over, but with fewer keystrokes.
- It is designed to save keying longer phrases by automatically completing the typing.
- This could be a letter head, address or long paragraphs which one uses when writing letters or documents.

Advantages of using AutoText in Word Documents:

- Less Typing.
- Store frequently used text and images.
- AutoText can be document-type specific.
- AutoText can be used as a library of clauses for document creation.
- Share AutoText throughout the firm using templates.
- AutoText can be shared throughout the enterprise.
- AutoText speeds up typing, eliminating the need to retype the same text over and over again.

To Create AutoText entry, follow these steps:

- Select a graphic or text to be included in the AutoText entry.
- Select the Auto Text from the Insert menu, the Auto Text dialog box is displayed.
- Type a short name in the Name box, click Add.
- Type the Short name.
- Highlight short name and pick Auto Text from Insert menu.
- Choose the Auto Text name and click Insert.
- The text is inserted in place of the selected Auto Text name.

MACROS: -

- In Microsoft Word, macros are automated sequences of actions that can be created to perform repetitive tasks.

- These actions can include formatting text, inserting content, or making other changes to the document.
- Creating and using macros can save time and effort, especially for tasks you frequently perform.

Uses of Macros:

- To speed up routine editing and formatting or typing like address of user's own organization.
- To combine multiple commands: for example, inserting a table with a specific size and borders, and with a specific number of rows and columns.
- To make an option in a dialog box more accessible.
- To automate a complex series of tasks.

Steps to record and run a macro:

- Start from the menu bar, click on Tools.
- From the drop down menu click on Macro.
- A sub menu appears.
- Click on Record New Macro.

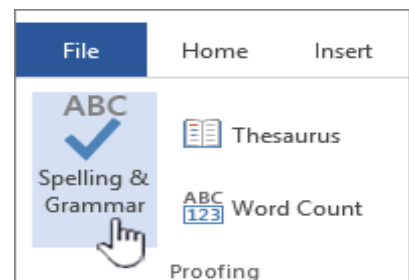

Spelling and Grammar tool: -

Microsoft Word's Spelling and Grammar tool helps users identify and correct spelling and grammatical errors in their documents.

Here's how you can use this tool:

1. Automatic Spelling and Grammar Checking:

- By default, Word automatically checks your document for spelling and grammar errors as you type. Misspelled words and potential grammar issues are underlined with red or green squiggly lines, respectively.

- To correct a misspelled word or grammar issue, right-click on the underlined word to see suggested corrections or grammar options.

2. Manual Spell Check:

- To manually check the entire document for spelling and grammar errors, go to the "Review" tab and click "Spelling & Grammar" (or press F7 on your keyboard).
- Word will navigate through the document, highlighting and providing suggestions for misspelled words or potential grammar errors.

3. Reviewing Spelling and Grammar Suggestions:

- When Word finds a spelling or grammar error, it will offer suggestions for corrections. You can choose to accept or ignore these suggestions.
- Use the "Change" button to accept the suggestion and move to the next error, or "Ignore Once" to skip the suggestion for that instance.

Running the Spelling and Grammar Check:

- Click the Spelling and Grammar button on the Standard Toolbar or press F7.
- If there is an error, the Spelling and Grammar dialogue box appears. The error appears in the text box at the top with suggestions below it.
- Click the required button on the right of the dialogue box as explained in the table below:

Ignore Once	Accepts the spelling or grammar used and moves onto the next error
Ignore All / Ignore Rule	Accepts the spelling or grammar used and ignores all future occurrences of it in the document
Add to Dictionary	Adds the word to the dictionary so that it is recognized in the future
Change	Changes the spelling of the word to the suggestion selected in the list

Change All	Changes all occurrences of the misspelling to the suggestions selected in the list
------------	--

- When the Spelling and Grammar check is complete, a dialogue box appears.
- Click Ok.

Drop Cap

A drop cap is a typographic design element often used at the beginning of a paragraph, section, or chapter in a document. It involves enlarging the initial capital letter of the first word, sometimes extending it into the top margin, to create a visually appealing and decorative effect.

In Microsoft Word, you can easily apply a drop cap to a paragraph using the following steps:

1. Open Microsoft Word: Launch the Word document where you want to apply the drop cap.
2. Select the Paragraph: Click within the paragraph or select the paragraph to which you want to apply the drop cap.
3. Access the Drop Cap Options:
 - Go to the "Insert" tab in the Ribbon.
 - In the "Text" group, click on "Drop Cap."
4. Choose Drop Cap Style:
 - You'll have three options: "Dropped," "In margin," and "None."
 - Dropped: This places the enlarged initial letter within the text, dropping it down by a certain number of lines.
 - In margin: This places the enlarged initial letter in the margin beside the text.
 - None: Removes the drop cap.

5. Customize Drop Cap:

- If you choose "Dropped" or "In margin," you can further customize the number of lines to drop or the distance from the text, respectively.

6. Preview and Apply:

- Click on the desired drop cap style to preview it. If it looks as you want, click to apply.

Page Formatting or Page Setup:

- It refers to setting of margins, page orientation and choosing paper size etc. before printing any document.
- Steps as below:
 - On the File menu, click Page Setup. The Page Setup dialog box is displayed.
 - On the Page Setup dialog box, click the Paper tab.
 - In the Apply to box, select an appropriate option, such as Whole Document or This Point Forward, to determine how much of the document to be printed on the paper size selected.
 - On the Page Setup dialog box, click the Layout tab. This setting is used only when the document contains headers and footers.
 - Click OK.

Text Formatting:

- In MS-Word, one can format the text to make the document more presentable and interesting.
- Format means the way a document looks or appears.
- One can change the font, font style, font colour, font size of the text and many more.
- Before applying any format to the text, select the section or part of text that you want to change.

To change the font, font size and font colour of the text in Word:

- Click and drag the mouse pointer from the starting point to the end to select the text whose font you wish to change.
- Open the Format menu.

- Click Font. The Font dialog box appears as shown below:
- Set the font to “Verdana” and font size to 10.
- Click the down arrow of the Font Color drop-down list box to change the color of the text. Select Dark Blue Color.
- Click the OK Button.

Document Dictionary

In Microsoft Word, a document dictionary refers to a custom list of words that you can use to check spelling and grammar against. This feature allows you to add words to the dictionary that might not be in the default dictionary, like industry-specific jargon or proper nouns. Here's how to manage and use document dictionaries in MS Word:

To add a word to the document dictionary:

- Open your Word document.
- Right-click on a word that you want to add to the dictionary (usually, it's a word that Word marks as misspelled).
- Select "Add to Dictionary." Word will add this word to the document-specific dictionary for this particular document.

To remove a word from the document dictionary:

- Open your Word document.
- Go to the "File" tab.
- Click on "Options."
- In the Word Options dialog box, click on "Proofing."
- Click on "Custom Dictionaries."
- Select the custom dictionary for your document (usually, it's named after your document's title).
- Click "Edit Word List."
- Select the word you want to remove and click "Delete."

To create a custom dictionary for a document:

- Open your Word document.
- Go to the "File" tab.
- Click on "Options."
- In the Word Options dialog box, click on "Proofing."
- Click on "Custom Dictionaries."
- In the Custom Dictionaries dialog box, click "New."
- Provide a name for your custom dictionary and click "OK."
- Select your custom dictionary and click "Change Default."
- Click "OK" to close the Custom Dictionaries dialog box.

You can now add words to this custom dictionary by right-clicking on them and selecting "Add to Dictionary."

Check Spelling and Grammar Using the Document Dictionary:

With your custom dictionary added and set as the default, Word will use it to check spelling and grammar while you work on your document.

Custom dictionaries are particularly useful when you are working with specialized terminology or proper nouns that are not recognized by Word's default dictionary. They allow you to maintain accurate spell-checking and avoid marking industry-specific terms or names as misspelled words in your documents.

Mail merge

- It is a method of taking data from a database, spreadsheet, or other form of structured data, and inserting it into documents such as letters, envelopes, mailing labels, and name tags.
- Mail merge in Microsoft Word is a powerful feature that allows you to create customized documents by combining a single template with a data source, such as an Excel spreadsheet, a database, or a list of addresses.
- Mail merge is a versatile tool that can save you a significant amount of time when you need to create multiple personalized documents. It's commonly used for sending bulk

letters, producing address labels for a large mailing list, or generating personalized emails.

Features of Mail Merge:

- It helps to produce multiple printed copies of a document such as a form letter; envelope or mailing labels.
- It can be used to create any type of printed document, as well as electronically distributed documents and faxes.
- One can also use mail merge to create any type of document that maps fields to data, not just mailings or directories.
- Many day-to-day applications may require similar text to be sent to a number of persons.
- For example: invitations to be sent to guests differ from one another in minor aspects such as names and addresses of recipients.

There are many step by using that we can use the feature of mail merge:

1. Prepare Your Document:

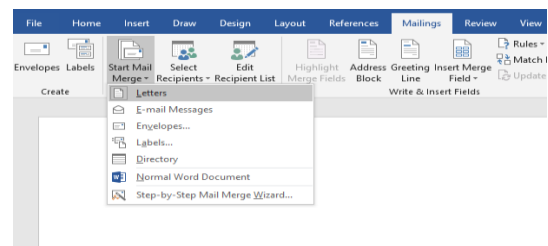

- Start by creating the main document, which serves as a template. In this document, you can include placeholders for the information that will be merged, such as the recipient's name, address, and other details. These placeholders are typically inserted using the "Insert Merge Field" option.

2. Prepare Your Data Source:

- You'll need a data source that contains the information you want to merge into your document. This data source can be an Excel spreadsheet, a Word table, an Access database, or even a list created within Word itself. Make sure that the columns in your data source match the fields you've set in your template.

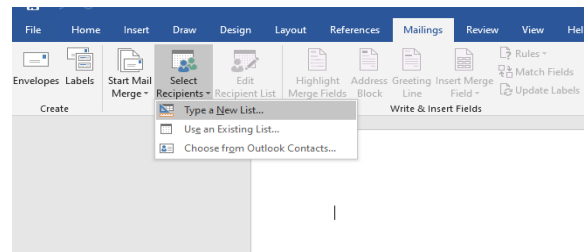

3. Start the Mail Merge:

- In Word, go to the "Mailings" tab.
- Click on "Start Mail Merge" and select the type of document you want to create, such as letters, envelopes, labels, or emails.

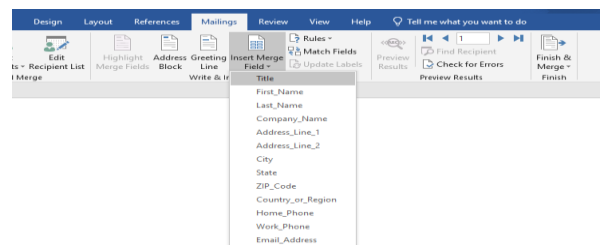

4. Select Recipients:

- Click on "Select Recipients" and choose your data source. This is where you link your template with your data source.

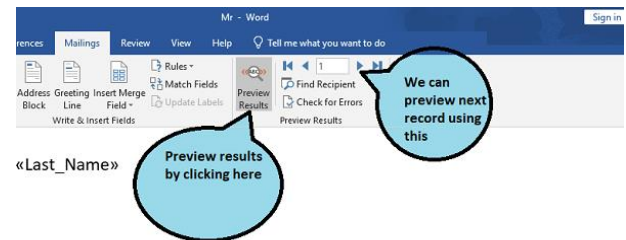

5. Insert Merge Fields:

- Click "Insert Merge Field" to insert placeholders for the data from your data source. Select the field names from your data source to insert them into your template.

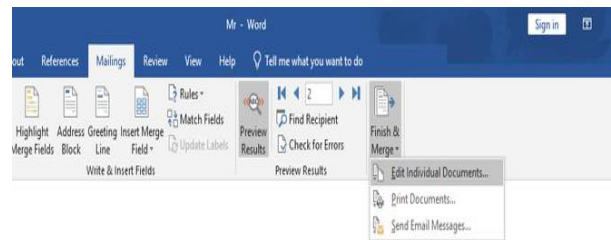

6. Preview Your Merge:

- Click "Preview Results" to see how your merged document will look with the actual data from your data source. You can use the forward and backward arrows to navigate through the records.

7. Complete the Merge:

- Once you're satisfied with the preview, click "Finish & Merge" to complete the mail merge. You can choose to either print the documents directly, create a new document, or send the documents as email messages.

File Management

MS-Word can create various types of document as per our requirement whether a blank document or a web page.

File management in Microsoft Word involves tasks related to creating, saving, opening, and organizing documents

Various file operations are —

❖ Creating a New Document:

- To create a new document, open Microsoft Word.
- Click on "File" in the top left corner.
- Select "New" to create a new blank document or choose from available templates.

❖ Saving and save as a Document:

- Your document and changes you make to a document are not saved to disk until you issue a save command. Saving is quick and easy. You should save often to minimize the loss of your work. Word has two save commands – Save and Save As.
- To save a document, click on "File" and then select "Save" or "Save As."
- Choose the location where you want to save the file, provide a name, and select the file format (e.g., .docx).
- After you save your document, and you continue to type, click the **Save** button, or click CTRL+S, every once in a while. That will save the changes you make as you work. Then, when you finish, save the document once again.

❖ Opening an Existing Document:

- To open a file, select Open... from the File menu. In the dialog box, click on the filename and then on the Open button.
- Navigate to the location where your document is saved, select it, and click "Open."

❖ File Formats:

- Word documents are typically saved in the .docx format. However, Word can open and save documents in various formats, including .doc, .pdf, .rtf, and more.

❖ Close a document

- To close a document, click its close box in the upper right of the title bar (box with the large X on it) or select Close from the File menu. The keyboard shortcut is <Ctrl + W>.

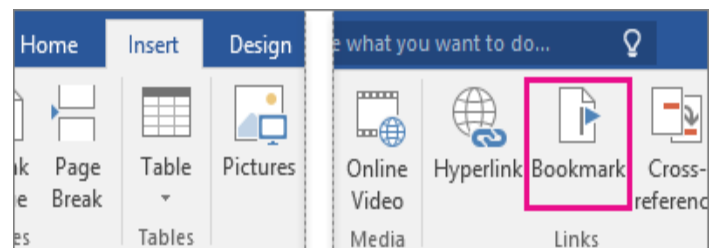

- When you are through working, and have saved your work, you close the file by clicking Close on the File menu.
- If you forget to save your document before you close the file, Word will remind you by asking if you want to save changes. You can then click Yes or No.

Bookmark:

- It is a location in the document or a selection of text that one names for reference purposes.
- After placing a bookmark, one can return to the same location again and again.
- This is an especially useful tool in a large document when one wants to be able to locate a specific passage quickly.
- It is one of the best facilities of MS-Word.
- Bookmark is just like a mark.

Creation of Bookmark:

- Highlight the passage you want bookmarked or insert your cursor at the location you want bookmarked.
- Click “Insert” on the menu bar at the top of the page, and then choose “Bookmark” on the drop-down menu.
- Type in a name for your bookmark then click the “Add” button. Your bookmark has now been added. Once you have already added a bookmark name, you can select that name when you want to add another bookmark later on.
- Use the same Bookmark dialog box when you want to go to a bookmark in your document. Within the dialog box, click on the bookmark you want to go to then click the “Go To” button at the bottom of the box. It will then take you to the bookmarked passage.
- Make the bookmarks in your document visible by clicking on the “Tools” button on the menu bar. Select “Options” on the drop-down menu, and then click on the “View” tab

in the Options dialog box if it's not already showing. Check the "Bookmarks" box then click "OK". Your bookmarked passages will show up in brackets.

Object Linking and Embedding

- OLE stands for object linking and embedding, is a feature that allows users to create and edit documents that contain objects created by different applications.
- In Microsoft Word, you can link or embed objects from other applications or files to enhance your documents.
- **For example**, you can embed bitmap images, sound clips, spreadsheet files, and other objects in Microsoft Word documents.
- You can use OLE to embed an Excel spreadsheet into a Word document. The spreadsheet will be displayed as an object within the Word document and can be edited directly within the document.

❖ Linking an Object:

- Linking an object means that the object you insert in your Word document is dynamically linked to its source file. This means any changes made in the source file will reflect in the Word document because the content is always up-to-date.

how to link an object:

- **Open your Word document:**
 - Start by opening the Word document where you want to link the object.
- **Insert the Object:**
 - Go to the location in your document where you want to insert the linked object.
 - Click on the "Insert" tab.
 - Choose the type of object you want to link (e.g., a document, spreadsheet, or picture).
 - Navigate to the file you want to link, select it, and click "Insert."
 - In the "Insert Object" dialog box, check the "Link to file" option.
- **Update Links:**

- When you open your Word document, you may need to click on "Edit Links" in the "Info" section to update the linked object if there have been changes in the source file.
- **Embedding an Object:**
 - Embedding an object means that the object is fully integrated into your Word document. The source file becomes part of your Word document, and changes made to the source file will not affect the embedded object in Word.
- how to embed an object:**
 - **Open your Word document:**
 - Start by opening the Word document where you want to embed the object.
 - **Insert the Object:**
 - Go to the location in your document where you want to insert the embedded object.
 - Click on the "Insert" tab.
 - Choose the type of object you want to embed (e.g., a document, spreadsheet, or picture).
 - Navigate to the file you want to embed, select it, and click "Insert."
 - **Edit the Embedded Object:**
 - You can double-click the embedded object to open it in the original application (e.g., Excel for an embedded spreadsheet) for editing.
 - **Saving Changes:**
 - Any changes made to the embedded object must be saved in the source application. They won't automatically update in the Word document.

Templates:

- Template is predesigned document in MS word which is used to create new word documents.
- In template you do not need to do any formatting, you just have to add your text only.
- If one has to use a document over and over again, it is better to turn that document into a template.
- A template in word processing terms is a document with some settings already in place.
- A template is simple words refers to a sample or a style guide for documents.
- When one first opens MS Word it gives a new document.
- This document is an in-built template.

Templates are helpful in the following ways:

- Template enables the used in the initial set up and configuration.
- Save a considerable amount of user time.
- The user can edit, save and manage once completed template as an ordinary word processing document.
- Provide standardization to the document.
- User can copy macros, styles and auto completion entries from one template.
- Allow reuse of many form of repeated document contents.
- User can focus on contents of the document than on formatting.

Creation of Word Templates:

- Create a document one wants to use as a template.
- Click Save or use the Ctrl + S shortcut key.
- In the save dialog box, navigate to the template folder.
