

ASSIGNMENT

UNIT II

NOTE

❖ Attempt any five out of the following

1. Explain the syntax and working of the IF statement in C with suitable examples.
2. Discuss the importance of conditional statements in decision making.
3. Compare and contrast for, while, and do-while loops in C and provide examples demonstrating the usage of each looping construct.
4. Write a C program that takes an integer input from the user and prints "Even" if the number is even and "Odd" if it's odd using the IF statement.
5. Create a C program to check whether a given year is a leap year or not using the IF-ELSE statement.
6. Develop a C program to find the largest among three numbers using nested IF statements.
4. Write a C program to determine the grade of a student based on their percentage marks using ELSE-IF ladder.
5. Implement a C program to perform basic arithmetic operations (+, -, *, /) based on user choice using a switch statement.
6. Create a C program to find the factorial of a number using the goto statement for handling repetitive calculations.
7. Write a C program to print the multiplication table of a given number using for loop.
8. Develop a C program to find the sum of digits of a given number using a while loop.
9. Create a C program to reverse a given number using a do-while loop.
10. Write a C program to print a pyramid pattern of stars using nested loops, where the number of rows is determined by user input.
